

# LIVING GREEN

HOW TO BE ENVIRONMENTALLY CONSCIOUS

IT STARTS IN  
**PARKS**  
HEALTH • COMMUNITY • ECONOMY • ENVIRONMENT

**FRPA**  
FLORIDA RECREATION  
& PARK ASSOCIATION

Eco-friendly decision-making and behaviors are conscious choices we make to preserve our environment, attributing to this planet's longevity as a healthy place for humanity's continued evolution.

**If we REDUCE, REUSE, RECYCLE we can make a difference. In the US alone 69% of newspapers and 90% of plastic bottles are left in landfills. Contact your local recycling offices today for information about facilities available to you.**

**The average suburban lawn consumes 10,000 gallons of supplied water to maintain its status. By using native Florida plants and grasses you can save money, water and create an environment for native insects and animals. Contact your local IFAS Extension office for information about Florida Friendly Yards**

Consider recycling tap water for drinking purposes, shortening your showers and closing the tap instead of letting it run unnecessarily. Contact your local Water Management District for more tips
